Silt-Pro II:

Knockout Pot De-Silting

Silt-Pro II is designed to de-silt landfill gas knockout pots with minimal equipment. A knockout Pot can generally be de-silted whilst the system is live, thus avoiding costly downtime.

Silt-Pro II simultaneously lifts silt, keeping it in suspension and re-circulates the water in the kop via a filter which collects the silt and debris as it is pumped out, the silt-free water is then returned back to the KOP, thus the water-seal is retained.

The silt and debris is collected in a disposable filter bag. The **Silt-Pro II** is portable allowing access to difficult locations on a landfill and requires attendance during de-silting operations. The **Silt-Pro II** utilises the existing compressed air supply.
